Subject: (?) Airport Frequencies for San Francisco
To: info-hams@ucsd.edu

I'm going to be visiting San Francisco in the next couple of days, and I would like to get the control tower frequencies for the San Francisco International Airport. Unfortunately I don't have the "Police Calls" book for the Western USA, and I can't pick one up at the local Radio Shack (I live in Alabama).

If someone out there happens to have these frequencies, I'd sure appreciate it if you'd e-mail them to me. I'm taking my HT, and since I'll be staying close to the airport, I'd like to tune in while I'm there and listen to what's going on.

Thanks in advance.

To subscribe to the boatanchors maillist send Email to:

boatanchors-request@gnu.ai.mit.edu.

The boatanchors maillist is for the discussion of vacuum-tube radios and related amateur radio equipment. It does not have to be very old or very heavy.

From: illuminati.io.com!nobody@uunet.uu.net
Subject: Followup: Was this a bad idea?
To: info-hams@ucsd.edu

A few days ago, I posted my article "Was this a bad idea?". It dealt with the fact that I had witnessed a rather horrid accident. The people involved were in jeopardy of losing their lives, and we were at least 2 to 3 miles from a house. I, while unlicensed, used my HT to call someone on the repeater and get emergency out there fast. They did, and the matter was thankfully resolved with no one being permanently injured.

Many of you were kind enough to email me your opinions, which all said almost the same thing: Yes, it probably WAS illegal, but who would complain?

To answer the q's proposed to me during the email barrage:

- (1) Yes, the situation was life-threatening.
- (2) Even if I knew I would face prosecution, and some ham-lawyer was listening, I would have done it anyways
- (3) No one was upset I did that
- (4) No one ever questioned my actions

(5) It was never brought up on the network, or the repeaters.

I still feel good that I did something to save a life, though I could have faced prosecution. However, that never crossed my mind once during the whole ordeal. I stayed long enough to give my witness report, and then we left the scene.

This article has prompted me to get a debate going with some ham friends (now that I just received my license in the mail today!) about this, and the particular issue of the ham using the police frequencies to get help for his friend out in CA(I believe?).

Again, thanks for all of you emailing me. I was supported all the way, and that's all I feel was necessary.

To: info-hams@ucsd.edu

Many years ago, about 1978 to be exact, I heard of a mod to changed the AM position of an FT101E/EE to FM(narrow band of course). This mod is not listed in my Yaesu share ware disk for mods, nor is it listed in QRZ DX cdroom. Does anyone know of this mod that could email me on it. I have a friend who has and FT101EE with a 2 meter transverter (FTV-250) than would like to have his converted.

(ae517@FreeNet.Carleton.CA) writes:

>Our cousins to the south pay less than \$6.00 U.S. for a license that's
>good for 10 YEARS!!!!

Actually, we don't pay anything for our licenses here; the under-\$6 fee is charged by the VECs (the organizations giving the tests) to cover handling costs for the paperwork. And some VECs don't charge anything at all. The FCC doesn't get a cent for ham licenses at this point.

There is a proposal for "vanity" calls, which would cost \$7 a year (actually \$70 up front for the 10-year license), but that's not in effect yet.

Subject: Newly licensed today!
To: info-hams@ucsd.edu

My Tech no-code license was processed April 26. "Great", I thought, "I'll be expecting it Tuesday or Wednesday." Those days came and went. Each day, I was even more and more upset. I actually had to go places those days, and wanted the opportunity to take my HT with me and program repeaters to hit along the way.

Friday, I didn't get to bed until 6:30 a.m. Late night working on an article for a magazine. Again, before going to bed, I said to myself "Oh, it COULD come today(Friday). It will. ON the night when I'll have to go work at that crummy bar and babysit overgrown children, I'll get my license." (I'm a bouner at a bar - the weekends hold nothing but dread and woe for me)

May 6, 1994: 1:30 p.m. EST. I trudge out to my mailbox and said "Look straight up into the sky. Don't look in the box first." I pulled out 3 letters. One small one, which was a hotel reservation confirmation card, a standard sized one, which was a bank statement, and then one that said it all: FEDERAL COMMUNICATIONS COMMISSION

I ripped that sucker open after running back into my apartment. I sat down at my desk and saw the callsign: KB8SGL
"Well", I sighed, "the callsign is different from what I thought, but hey, who cares? I'M LICENSED!"

I fired up three repeaters calling N8JJQ, Tim Porter, hoping

he'd be online. No dice. Finally, I resigned myself to fate:
No Tim! And I'm DYING to make my FIRST contact!

I went to 146.88 and said "KB8SGL listening."

Silence. Then...

"I didn't catch it all," he said, and I KNEW who it was! John!
N8IUM!

"but it *sounded* like SGL? This is N8IUM."

I sputtered "John! I've been listening to you for months! N8IUM!!"

We chatted. He asked about my class for the license, how long it took,
and who was there, etc. Then, KB8RSC cut in. Brian!
A guy who knew me from local bulletin boards. I was talking
to two hams at once. I couldn't keep up.

I thought after listening for months, I'd have it down pat. I'd know
how to handle myself. I was so excited I forgot to write down callsigns.
I didnt' even ask the right questions I promised myself Id' ask!
I was beyond ecstatic.

My HT, sadly, was starting to crackle. Even one of the best radios
can have interference from outside sources. I had to give them my
farewell, since I could barely hear them. I signed off, knowing
I had made my first contact. I'm thankful it was with an established
ham who was willing to give me a few minutes to get it all out.

Since I hadn't had my shower, and my apartment is horrible for
talking on this HT, I now sit at my terminal and type. As soon
as I'm done relaying this story, I'm going to finally get my
shower, go outside(and a gorgeous sunny day it is!), and
talk without the appliances interfering.

Did you all enjoy that? I did. I sure like new hams, they haven't been polluted and they are full of fire.

At first I kinda pooh-poohed the tech-lites... how could making a repeater contact be as thrilling as making MY first qso on 15 meter cw? Obviously it WAS!

Thanks and congratulations! Give me a shout if you hear me on.

Err, with a name like "Kensy-Rudick", I'm a little surprised her "dad" is
named Waugh.

I wonder if this is another permutation of the Shergold game?

I also run an R-5, with my TS850SAT barefoot @ 100 watts. The antenna
couldn't work better! I can work 'em if I can hear 'em. The quality of
construction is exceptionally good.

My SWR curves were precisely what Cushcraft advertises the first time
up. I didn't have to re-tune the antenna one single time. All bands
tuned very nicely.
